ABOUT SYNNAMON

An international contracting platform for proven technology delivery

Synnamon Technologies FZC is a technology services and contracting company established in the Sharjah Airport International Free Zone (SAIF Zone), United Arab Emirates.

Synnamon serves as the international contracting and commercial platform for selected engagements delivered in strategic collaboration with SYSH Innovations and Synet Technologies Lanka. The three companies operate as independent legal entities under common ownership and strategic partnership.

3

Independent legal entities — **India, Sri Lanka**, and the **UAE** — operating under common ownership and strategic partnership to deliver technology and property assessment services worldwide.

OUR OPERATING MODEL

A distributed delivery model across three countries

Synnamon acts as the commercial and contracting interface for selected international engagements. Depending on project requirements, work may be executed through specialized teams across the associated companies:

India

Software Engineering • Artificial Intelligence • Product Development • Technology Innovation

Sri Lanka

GIS • Property Assessment Services • Geospatial Production • Quality Assurance

United Arab Emirates

Contracting • Client Engagement • Commercial Management • Business Development • Strategic Partnerships

This distributed operating model enables Synnamon to assemble the appropriate technical and operational resources for each engagement while providing clients with a clear and efficient contracting structure.

BY THE NUMBERS

A delivery network built on scale and specialization

3

Independent countries in the delivery network — India, Sri Lanka, and the UAE.

10

Core capability areas spanning software engineering, GIS, and property assessment.

2

Proprietary platforms developed by the associated engineering teams — SyGIS and draftEzy.

3+

Major U.S. county and municipal projects, including Clark County, Detroit, and Palm Beach County.

CORE CAPABILITIES

Access to a full spectrum of technology and delivery expertise

Through its strategic delivery relationships, Synnamon can provide access to capabilities including:

CAMA Data Verification.

Building Footprint Creation and Correction.

Geospatial Quality Assurance.

Enterprise Workflow Solutions.

Large-Scale Data Production and Validation.

Custom Software Engineering.

Artificial Intelligence & Workflow Automation.

GIS & Spatial Intelligence.

Property Assessment & Appraisal Services.

Sketch Digitization and Verification.

PROPERTY ASSESSMENT EXPERTISE

Deep experience across major U.S. property modernization programs

A significant area of expertise across the associated companies is the U.S. Property Assessment and Appraisal industry.

The teams have extensive experience supporting large-scale property modernization, sketch digitization, aerial imagery verification, GIS production, CAMA-related workflows, and property data quality programs. This experience includes major county and municipal projects, together with numerous property assessment projects across the United States.

Clark County, NV

Detroit, MI

Palm Beach County, FL

TECHNOLOGY & INNOVATION

Proprietary platforms built for scale and accuracy

Synnamon's delivery network combines deep domain knowledge with software engineering and emerging Artificial Intelligence technologies. Proprietary platforms and specialized tools developed by the associated engineering teams include:

**SyGIS**

GIS-based workflow and verification technology

**draftEzy**

Building sketching technology

More recently, AI-assisted workflow improvements have demonstrated the potential to substantially increase production efficiency while maintaining the accuracy, quality, and reliability expected by clients.

THE SYNNAMON ADVANTAGE

UAE commercial accessibility, backed by proven delivery capability

Synnamon combines the commercial accessibility of a UAE-based contracting company with established software engineering and geospatial delivery capabilities in India and Sri Lanka. This structure provides:

- ◆ A single international contracting interface.
- ◆ Access to specialized engineering and GIS teams.
- ◆ Flexible project resourcing.
- ◆ Cost-efficient offshore delivery.
- ◆ Deep Property Assessment domain expertise.
- ◆ Proven experience with large-scale U.S. projects.
- ◆ Continued investment in AI and workflow automation.

OUR PHILOSOPHY

Understand the client's business first. Engineer technology that creates lasting value.

Synnamon's objective is not simply to provide resources, but to establish long-term technology partnerships that combine business understanding, engineering expertise, operational capability, and innovation to deliver measurable value.

STRATEGIC PARTNERSHIP

A single point of contact for global technology delivery

Synnamon Technologies FZC serves as the international contracting and commercial platform for selected engagements delivered in strategic collaboration with SYSH Innovations and Synet Technologies Lanka.

This structure provides international clients with a streamlined commercial relationship while drawing upon the software engineering, geospatial, production, and domain expertise available across India and Sri Lanka.

"Understand the client's business first. Engineer technology that creates lasting value."

GLOBAL REACH

A delivery network spanning India, Sri Lanka, and the UAE.

PROVEN EXPERTISE

Deep experience across major U.S. property assessment programs.

AI-DRIVEN

Continued investment in AI and workflow automation.
